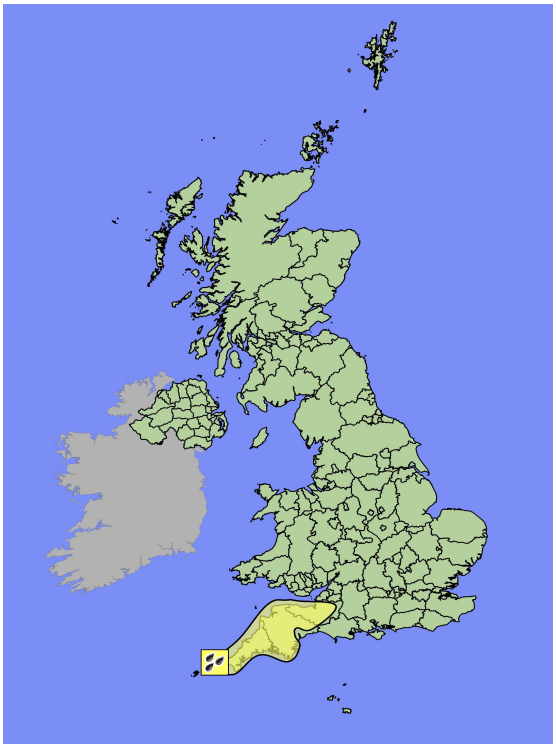
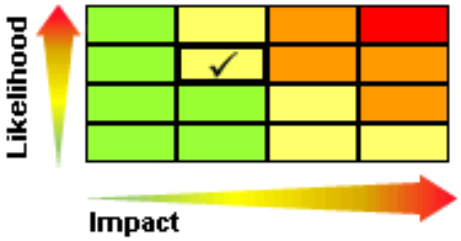
National Severe Weather Warning Service





Chief Forecasters Assessment
A fairly active frontal system will move quickly eastwards across the UK during Monday bringing most regions a spell of wet and windy weather. Rainfall totals are likely to be variable, with 5-15 mm falling fairly widely and locally 25 mm over southwest facing hills. This may be sufficient to produce further localised flooding given that the ground is already saturated.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **12:00 on Mon, 28th Jan 2013** until **20:00 on Mon, 28th Jan 2013**

Further rain, some heavy, will affect southwest England during Monday afternoon and into the early evening.

Given the saturated ground, the public should be aware that further localised flooding is possible.
